ALEXANDRA

Voice companion for Elite Dangerous | Windows friends beta 0.1.25

GET STARTED

- Install Alexandra. No separate .NET install needed.
- Choose your microphone, keyboard or HOTAS push to talk, and API key. Review cloud processing, then Save and start.
- Hold to speak. Release to hear the answer. Press again to interrupt. No wake word or command prefix.

ASK ABOUT YOUR GAME

- Your ship, modules, cargo, route, missions, materials and recorded construction needs.
- Your carrier's last-recorded location, fuel and jump plans; stored ships and modules.
- Nearby commodities, stations, engineers and material traders; public Inara, Frontier and Reddit research.
- Ask follow-ups naturally: "Is there a closer option?" or "Give me the short version."

REMEMBER WHAT MATTERS

- Save goals, notes and preferences. Ask "What was I working on?" or "Forget that note."
- Local Markdown session journals track travel, trades, missions, goals and combat. Open session logs in Setup.
- Journals are on by default and catch up from available game records after time away. Starts with new activity after enabling.

COMBAT COMPANION

- "Check my pips" or "What's my target?" gets a short answer from local game data.
- "How did that fight go?" reviews recorded damage, rewards and losses, not an invented cause.
- Optional callouts warn of shield loss, low hull and heat damage. On by default; turn off in Setup.
- Callouts skip busy or stale moments. Selected-voice clips use API credit initially, then are cached for this launch.

SEE THE GAME AND COPY DESTINATIONS

- "Take a photo" or "take a screenshot" saves a game PNG in Pictures > Alexandra.
- "Explain this panel" inspects the visible game and answers aloud. Keep Elite in front.
- Copy one verified system name: "Copy that system." Station names are spoken separately.
- "Paste that" sends Ctrl+V with Elite in front, the Galaxy Map open and its search field selected. You still submit the search and plot the route.

MAKE IT YOURS

- Right-click for Minimal mode, Keep on top and Thinking sound. Drag or resize; position and size are remembered.
- Setup changes voice/input and preferences. Marin is the default. Optionally open Alexandra when Elite starts.
- Automatic updates are on by default. Downloaded updates apply on the next launch.

GOOD TO KNOW

- Internet and paid OpenAI API access required. No API key is included.
- Push-to-talk records your voice. Cloud processing sends voice, relevant game data and requested analysis images to OpenAI.
- Memory and session journals stay local; relevant memories can accompany questions. Review logs before sharing. Debug logs default off.
- Records may be old or incomplete. No live shield percentage/ammo, private Inara access or automatic flying.
- Unsigned beta: Windows may show Unknown publisher. Use the official download below; don't disable Windows security.
